

Natural support for healthy female sexual desire

Fulfillene™ Libido for Her contains a blend of nutraceutical and herbal ingredients designed to promote healthy female sexual desire and pleasure. This synergistic product aims to help optimize hormone balance, blood flow, and adrenal function. The adrenal glands are best known for their role in producing hormones that help us have an appropriate response to stress, but in women, they also produce testosterone as well as other hormones, all of which work in concert with other tissues and glands to help regulate healthy sexual function and desire.

Ingredients in this formula provide subtle and safe support to the body's natural ability to regulate and balance the hormones estrogen, progesterone and even testosterone. While testosterone is usually thought of exclusively as a male hormone, women produce small amounts of testosterone, and this hormone plays a key role in the female body, having a positive influence on sexual desire and potentially helping to manage an occasionally low sex drive. All herbs used in this formula have been standardized to ensure quality and a consistent amount of their beneficial chemical compounds.

HIGHLIGHTS:

- Damiana (*Turnera diffusa*) and Chrysin are natural inhibitors of the aromatase enzyme, which converts testosterone into estrogen. By reducing activity of this enzyme, these compounds help promote a healthy balance of testosterone and estrogen, which may be helpful in supporting sexual desire.
- Tribulus (*Tribulus terrestris*) and Deer Antler (*Cervus nippon*) may help with healthy female libido by supporting the natural production of androgens.
- DHEA (dehydroepiandrosterone) is a naturally occurring compound in the body which converts into hormones such as estrogen and testosterone, and which may help support healthy sexual function in post-menopausal women.
- Tongkat ali (*Eurycoma longifolia*), a Southeast Asian plant also known as “Malaysian ginseng,” helps support testosterone levels and may help bolster occasionally low libido.
- Chinese Ginseng, Horny Goat Weed and Ginkgo Biloba are herbs that support blood flow and adrenal health, which are also important factors in positively influencing sexual desire.

Recommended Use:

As a dietary supplement, take two capsules per day, or as directed by your health care practitioner.

Note: Women with hirsutism or PCOS (polycystic ovary syndrome) should not use this product without permission from their health care practitioner
